

Public Address System

# **User Guide**

## Public Address Amplifier

## Caution

## Overview

Thank you for using our series of public address amplifier, please carefully read this user guide before any operation.

The product includes pre-amplifier so you can directly connect the sound source and play it! This series of amplifier has Main Outputs: 4-16ohm/70V/100V or 120V/240V, Zone outputs: 2/4/5/6/8/10 Zones with 100V or 240V, inputs: 2/3 Aux Inputs, 1/2 MIC Inputs, USB/SD, FM Radio, Bluetooth. Both of the inputs volume can be controlled individually.

Every amplifier has over-current protection, over-voltage protection, short-circuit protection, DC protection and Boot time delay etc function.

## Service Regulations

### 1.Preparation

- Check all the input interfaces and ensure all the interfaces are intact. The Interfaces includes 3 Auxiliary Input, 2 Microphone Input, USB Port, SD Port and FM, Bluetooth etc.
- Ensure that the external load is less than the machine rated load, or the amplifier will not work normally.
- Check the Grid that will be used, if the Grid seriously fluctuates or is over 240V then you need a AC Stabilified Voltage Power.

### 2.Start

- Insert the power plug into an 220V 50Hz outlet.
- Connect the Input Signal.
- Connect the Load Speaker.
- Turn on the power, and slowly turn up the volume, observe the Output Level LED and ensure the amplifier is not overloaded.

## Caution

- Although the machine has reliable short circuit protection, we suggest you to use carefully and avoid short circuit in order to increase the service life.
- The machine should be moisture-proof packaged and make sure prevent vibration during handling.
- If the amplifier is overloaded, please turn down the volume.

## Front Panel

### POWER SWITCH 1. Power Switch

Turn on/off the power of machine. The power indicator LED will glow when turning on the amplifier.

### MIC1 VOL 2. MIC1 Volume Control Knob

Turn up/down the volume of MIC1. Twisting to left/right will turn down/up the volume. (If the amplifier is 2U or 3U height, then this MIC have priority function)

### MIC2 VOL 3. MIC2 Volume Control Knob(Part)

Turn up/down the volume of MIC2. Twisting to left/right will turn down/up the volume.

### MIC3 VOL 4. MIC3 Volume Control Knob(Part)

Turn up/down the volume of MIC3. Twisting to left/right will turn down/up the volume.

### LINE1 VOL 5. Line1 Volume Control Knob

Turn up/down the volume of Line1. Twisting to left/right will turn down/up the volume. Keep listening and adjust to avoid harsh noises.

### LINE2 VOL 6. Line2 Volume Control Knob(Part)

Turn up/down the volume of Line2. Twisting to left/right will turn down/up the volume. Keep listening and adjust to avoid harsh noises.

### LINE3 VOL 7. Line3 Volume Control Knob(Part)

Turn up/down the volume of Line3. Twisting to left/right will turn down/up the volume. Keep listening and adjust to avoid harsh noises.

### LINE2/USB VOL 8. Line2/USB Volume Control Knob(Part)

Turn up/down the volume of Line2 or USB which depends on the sound generator. Twisting to left/right will turn down/up the volume. Keep listening and adjust to avoid harsh noises.

### LINE2/USB VOL 9. Line3/USB Volume Control Knob(Part)

Turn up/down the volume of Line3 or USB which depends on the sound generator. Twisting to left/right will turn down/up the volume. Keep listening and adjust to avoid harsh noises.

### USB 10. USB/SD Volume Control Knob(Part)

Turn up/down the volume of USB/SD. Twisting to left/right will turn down/up the volume. Keep listening and adjust to avoid harsh noises.

### CHIME 11. CHIME(Part)

When pressing this button will make MIC input the most priority. It will only play the MIC1 audio despite if there has other to play.

## Parameter

### KEY PARAMETER

Max Power	350w	500w	650w	700w	800w	1000w	1200w	1500w	2000w
	4-16Ω/70V/100V(110V)			120V/240V					
Output Mode	2-8 Zones			120V/240V					
Frequency Response	80Hz-18KHz±2dB								
Input Sensitivity	Mic:-52dB(10mv) Line:-10dB(400mv)								
Signal to Noise Ratio	≥80dB								
Record Output Level	-10dB								
Monitor Output Level	+4dB								
Rated Voltage	AC220V±10% 50Hz								

## Parameter

### KEY PARAMETER

Max Power	Output	50w	60w	80w	100w	120w	150w	180w	200w	250w
	Total	4-16Ω/70V/100V(110V)								
Frequency Response	Mode	100V(110V)								
		80Hz-18KHz±2dB								
Input Sensitivity		Mic:-52dB(10mv) Line:-10dB(400mv)								
Signal to Noise Ratio		≥80dB								
Record Output Level		-10dB								
Monitor Output Level		+4dB								
Rated Voltage		AC220V±10% 50Hz								

## Front Panel

### 12. Bass Volume Control Knob(Part)

Turn up/down the volume of bass. Twisting to left/right will turn down/up the volume.

### 13. Treble Volume Control Knob(Part)

Turn up/down the volume of treble. Twisting to left/right will turn down/up the volume.

ZONE BUTTON

### 14. Zone Switch Buttons(Part)

Pressing each button will turn on the corresponding zone. Also having indicator LEDs for showing if the zones is on or off(The zone button num depends on the specific product, it can be 0,2,4,5,6,8,10).

ZONE KNOB

### 15. Zone Individually Control Knobs(Part)

Each knob has 5 level to control the volume of corresponding zone. Twisting to left/right will turn down/up the volume(The zone knob num depends on the specific product, it can be 0,2,4,5,6).

SCREEN

### 16. LED Screen(Part)

The screen shows some playing info which depends on the specific product.

### 17. USB Port(Part)

Which can be inserted by U Disk. Within MP3 Player to play mp3/wmv file.

### 18. SD Card Port(Part)

Which can be inserted by SD Card. Within MP3 Player to play mp3/wmv file.

BLUETOOTH

### 19. Bluetooth(Part)

The amplifier can connect to mobile phone, computer or other machine that supports bluetooth.

FM RADIO

### 20. Bluetooth(Part)

Automaticly search audio station and play it.

### 21. Infra-red Remote Control(Part)

The amplifier can be controlled by a Infra-red remote controller.

POWER LED

### 22. Power Indicator LED

The LED will glow when opening the amplifier.

OUTPUT LED

### 23. Output Level Indicator LED

The LEDs indicate the output level, it grows from left to right. The right most LED(+4 red) shouldn't be long bright(Which means the amplifier is overloaded).

MIC INPUT

### 24. MIC Input

Connect to a microphone.

## Front Panel

PLAY/PAUSE

### 25. PLAY/PAUSE SWITCH

Available in MP3 Player, press this button will pause the playing, press it again will replay the song played before.

PREV/VOL-

### 26. Prev Song/Vol-

Mp3 Mode: Click: Prev Song; Long Press: Turn down volume.  
FM Mode: Click: Prev Audio Station; Long Press: Turn down volume.

NEXT/VOL+

### 27. Next Song/Vol+

Mp3 Mode: Click: Next Song; Long Press: Turn down volume.  
FM Mode: Click: Next Audio Station; Long Press: Turn down volume.

MODE

### 28. Mode Switch

Each click on this button will change to the next mode:  
U Disk >> SD Card >> Line >> FM Radio >> Bluetooth >> U Disk.

## Back Panel

LINE INPUT

### 1. Line Input

RCA Jack for input signal, the standard signal level is -10dB. Every line Input has corresponding knob to control it's volume(The line num depends on the specific product, it can be 2 or 3).

LINE OUTPUT

### 2. Line Output(Part)

RCA Jack export signal, the output signal level is +3dB. It can be connect to next amplifier or monitor equipments.

MAIN OUTPUT

### 3. Main Output

Main power outputs that can be connected to speakers, the output have 3 modes: 70V constant output, 100V constant output or 4-16Ω output (which means it can be directly connected to 4-16Ω speakers).

MAIN&ZONE OUTPUT

### 4. Main Output & Zone Output(Part)

Main power outputs that can be connected to speakers, the output have 3 modes: 70V constant output, 100V constant output, 4-16Ω output. Also have 5 zone outputs.

ZONE OUTPUT

### 5. Zone Output

Zone power output that can be connected to speakers(Zone is designed for individually controlling speakers).

## Back Panel

MAIN OUTPUT

### 6. Main Output

Main power outputs that can be connected to speakers, the output have 2 modes: 120V constant output or 120V constant output.

FM ANT

### 7. FM Antenna(Part)

FM antenna port that can be connected to antenna or electronic wire that is out of door.

FUSE

### 8. Fuse

It shields for voltage instability or other equipment trouble. The fuse will blew out when the machine overcurrent.

POWER LINE

### 9. Power Line

The power line is YJH-A standard(220V 50/60Hz).

RC PORT

### 10. Remote Control Port(Part)

Included in some engineering machine(EVT). It's 6.35 port for 12V/24V NetWaker.

## Connect and Operate

1. Please confirm the power supply voltage is in conformity with the machine.
2. Please turn off the power when connect input and output.
3. Please confirm the speaker load is in conformity with the machine.
4. Turn down the main volume when turn on the power.

The back panel in diagram is just for reference of connecting, the practical panel depends on the specific model.
